Ice Cap

Ice cap is a dry cold application. The ice cap used for the head, has a wide opening that allows it to be filled easily with ice chips, as does the ice collar, a narrow bag curved to fit the neck. Single use ice bags are frequently used.

Hot Water Bag

Hot water bags is also called hot water bottles, are rubber bags filled with hot water and used for heat therapy. It is used to manage pain, such as headache or arthritis, or keep yourself warm on a cold night. Hot water bottle are safer than electrical heating pads, which can start fires or cause electric shocks. Hot water bags may cause injury if we don't use carefully.

Cold Sponging

Cold sponging is used to reduce temperature in a client with hyperpyrexia. Large area of the body are sponged at one time permitting the heat of the body to transfer to the cooler solution on the body surface. Often wet towels are applied to the neck, axilla , groin and ankles where the blood circulation is close to the skin surface. Each area is dried by patting rather than by rubbing. Since the rubbing will increase the cell metabolism and raise the heat production. The vital signs are checked very frequently to detect the early signs of complications.

Cold sponging is hazardous to the client if the temperature of the body is brought down rapidly from a high temperature to a very low temperature. In cold sponging, the temperature of the water is kept between 65 and 90 degree F.

Tepid Sponging

Tepid sponging is a safe method to reduce the body temperature in high pyrexia. It is carried out on the order of a physician. The temperature of the water is kept between 85 and 100 degree F.

3.2 MEDICAL FOMENTATIONS: (STUPES)

Medical fomentations are moist heat applications, in which a medicine (e.g. turpentine) is applied locally to augment the effects of the hot compresses used. Stupes are commonly used to relieve tympanites by increasing the peristalsis and relaxing the muscle spasm.

Articles:

1. Kettle with boiling water.
2. Wringer with wringer rods placed in a basin.
3. Lint or flannel pieces, large enough to cover the area.
4. Plates (2)

A tray Containing:

1. Cotton balls in a container.
2. Forceps.
3. Olive oil or vaseline.
4. Paper bag.
5. Kidney tray.
6. Waterproof over and cotton pad.
7. Hot water bag with cover.

It will be necessary to insert a flatus tube to expel the flatus after the application of stupes.
