Pulse oxymeter

Pulse oxymeter is a device useful to measure the oxygen level (oxygen saturation of the blood) It is an easy painless measure of how well oxygen is being send to parts of the body. At the same time it measures the pulse rate also.

5.8 Blood Pressure

Blood pressure is the force or pressure of blood against the walls of blood vessels as it flows through them.

Hypertension is a silent killer disease

It depends on the following factors:

1. Force of the heart beat
2. Elasticity of the blood vessel wall
3. Volume of blood in circulation
4. Dilatation on concentration of the small arteries and capillaries.

Systolic pressure – Highest pressure in the arteries due to contraction of the heart

Diastolic pressure – Lowest pressure. It occurs between the heart beats

Pulse pressure in the difference between the systolic and diastolic pressures. It is normally about 35 and in a measure of the heart's strength

Variation in Blood pressure:

Rise of blood pressure due to

- Fear
- Worry
- Emotions
- Exercise

Hyper tension – high blood pressure 140/90 mmHg
Hypo tension – low blood pressure 90/60 mmHg
Normal Range is 120/80 mmHg

5.8.1 Types of Blood pressure Monitoring Equipment

1. Sphygmomanometer: It includes a pressure manometer, unify cuff inflatable rubber bladder and a pressure bulb with a release valve that inflates the bladder.

2. Electronic Blood pressure device: Many different types of electronic BP machines are available to determine BP automatically. They relay on an electronic sensor to detect the vibrations caused by the rush of blood through an artery.
