7.6.4.2 Using Recent documents

OpenOffice keeps a list of recently opened files. **File → Recent Documents** option can be used to open an existing worksheet from the list as shown in Figure 7.26

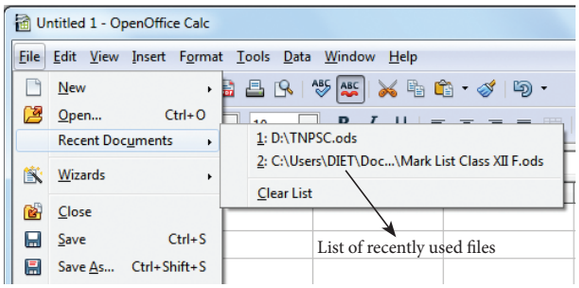

Figure 7.26 List of Recent Documents

7.7 Copy, Cut and Paste

7.7.1 Copy and Paste Data

- Select the cell or cells you want to copy
- Select **Edit → Copy or Click** "**Copy**" icon from the standard toolbar or Press Ctrl + C
- Move the cell pointer to the cell in which you want to paste.
- Select **Edit → Paste or Click** "**Paste**" icon or Press **Ctrl + V**

7.7.2 Cut and Paste Data

- Select the cell or cells you want to cut
- Select **Edit → Cut or Click** "**Cut**" icon from the standard toolbar or Press **Ctrl + X**
- Move the cell pointer to the cell in which you want to paste.
- Select **Edit → Paste or Click "Paste"** icon or Press **Ctrl + V**

7.7.3 Copy and Paste Formula

- The process of Copy and Paste data is used for copying formula.
- When you copy a formula from one cell to another cell, the address of the pasted formula will change according to its row. This is called "Relative Cell Reference" (Refer Figure 7.27).
- Example:

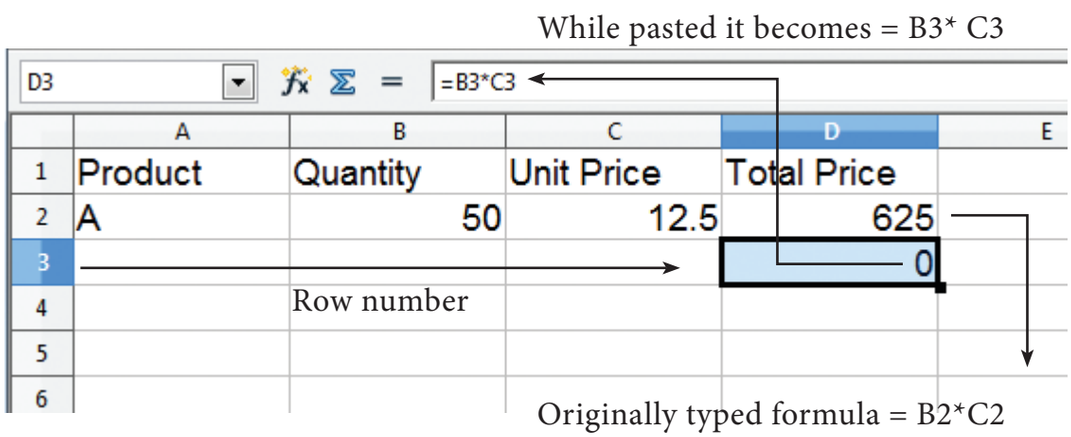

Figure 7.27 Copy and Paste formula to multiple cells
