Practical Practice:

1. Open the spreadsheet which was created in Illustration 1.
2. Align all headings as center and make them bold.
3. Align all Register numbers and marks in center
4. Apply different font styles to the entire worksheet.
5. Save the changes and close the file

Part – III Working with Functions and Chart

7.12 Functions

OpenOffice Calc has more than 350 functions under 11 categories. Functions are predefined formulae already available with Calc. They are used to perform several frequently done calculations. Every function has a unique name and a prototype. Functions are categorized according to their functionality. For example, the functions such as Sum, Average, Sin, Cos etc., are categorized as "Mathematical Functions".

7.12.1 Inserting Functions into Worksheet:

A function can be inserted by (i) Direct Insert Method or (ii) Using Function Wizard method.

7.12.1.1 Direct Insert method:

If you know the function name and its syntax, it can be directly typed in any cell of the worksheet.

For example, SUM is the most frequently used function to add a set of values. The syntax of the SUM ( ) is

= SUM (range 1; range 2; range 3..... range n)

If you want to know the sum of the values in A1, A2, A3, A4 and in A5, Place your cell pointer in A5 and directly type the formulae as follows.

= SUM (A1:A4)

While inserting a function the following points should be kept in mind.

1. A function should begin with an equal sign.
2. Use proper name for the function to be used.
3. Arguments should be given within the brackets as per the syntax. Each function has a unique argument list.
4. Press "Enter" key after typing the function.
