If you select any particular category, the Functions list box shows the functions which belongs to the selected category. If "All" is selected under category all functions in calc is displayed in alphabetical order. Refer Figure 7.42

Function Description

When you select a function, the function wizard shows the function name, syntax and a small description about the function on the right side of the dialog box. Refer Figure 7.43

Inserting a function using Function Wizard: (with Cell Reference)

The following steps explains to insert POWER( ) function in a cell.

About POWER ( ) function:

POWER ( ) is a function which is used to calculate power of an exponent value of a number. This function is categorized as a Mathematical function. There are two inputs needed to find the power value of a number. They are, Base value and exponent value. For example, to find the value of 25 to the power of 2 (25^2) where 25 is the base value, 2 is the exponent value.

The syntax of POWER( ) is = **POWER (Base ; Exponent)**

Both Base and Exponent are arguments. In Calc, arguments are separated by a semicolon.

Inserting POWER( ) in a worksheet:

Step 1: In cell A2 type the base value 25

Step 2: In cell B2 type the exponent value 2

Step 3: Move the cell pointer to C2; in which you want display result.

Step 4: Click *fx* icon from Formula bar (or) choose Insert → Functions (or) Press Ctrl + F2.

Step 5: Pull down category list box, Choose "Mathematical"

All function under Mathematical category is displayed in the "Functions" list box
