CHAPTER 8

# Presentation Basics

## Learning Objectives

After learning this chapter, the students will be able to

- Know the open source presentation software
- explore opening a new presentation using Impress
- create a new presentation using various ways using Impress
- Know parts of the main Impress Window
- differentiate five sections of Task pane
- explain Window elements of Impress
- differentiate various views in Workspace
- explore drawing Objects & inserting OLE
- draw freeform shapes
- rotate Objects
- create animation in slides/objects

## 8.1 Presentation Software - Meaning

- A presentation software is a computer software package used to show information, in the form of a slide show.

**It includes three major functions:**

- an editor that allows the text to be inserted and formatted,
- a method for inserting and manipulating graphic images and
- a slide-show system to display the content.
- Presentation software is used to create presentations, quizzes, e-learning packages and multimedia products.
- Most presentation software packages will create your multimedia product using a series of slides.
- Text, images, video, animations, links and sound can be combined on each slide to create a final product.

The most commonly known presentation programs are OpenOffice.org Impress, Microsoft PowerPoint and Apple's Keynote. In this chapter, we are going to explore on OpenOffice.org's presentation Software Impress.
