To know the complete color code visit:

https://www.w3schools.com/tags/ref_colornames.asp

The above illustration 10.1 can be re-written as follows to get the result

```
<html>
        <head>
                <title> Background Colour change </title>
        </head>
        <body bgcolor = #FFFF00>
                This is my browser with different colour
        </body>
</html>
```

(ii) Body text Colour: text = color

The default text colour of body section is "black", it is often called as automatic color. text attribute within body tag is used to change the text colour.

The tag to change body text colour:

<body text = color_name/color_code>

Illustration 10.2 – HTML code to change background and text color of a browser's body

```
<html>
        <head>
                <title> Background Colour change </title>
        </head>
        <body bgcolor = #FFFF00>
                This is my browser with different colour
        </body>
</html>
```

To the above code, text will be displayed in Red color on yellow background. You can also use colour code instead of colour name.

(iii) Background image: background=image

An image or picture can be applied as background to a webpage. When you insert an image as background, the text will be displayed on top of the image. Background images can be a texture or bitmap or even a photo.

When you insert a small image, the browser takes the image and repeats it across and down to fill browser window. Inserting animated images (GIF images) creates more interesting.

The tag to apply an image as background:

<body background = "image_name_with_extenstion">
