Illustration 10.3 – HTML code to apply an image as background

```
<html>
<head>
        <title> Image as background </title>
</head>
        <body background = “flower01.gif”>
        This is my browser with an image as background
</body>
</html>
```

While including an image as background, the image file name is not required to be in double quotes. The code **<body background = flower01.gif>** can also produce the same result.

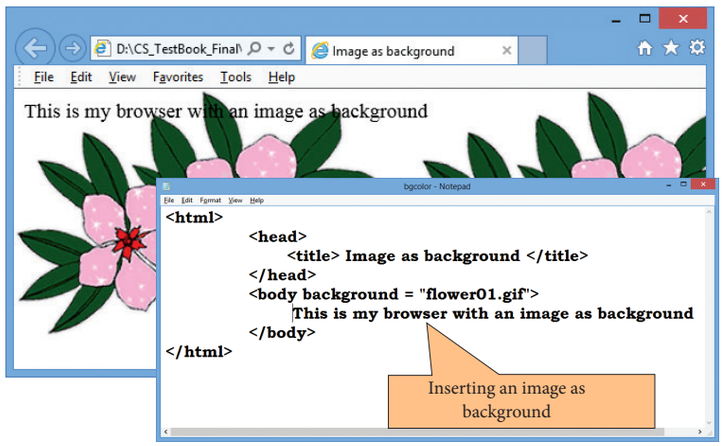

Figure 10.6 Internet Explorer with an image as background

If your image file name is long or split as two more words or along with path, should be specify within double quotes.

Remember that, if the image file and HTML source are located in different locations i.e. in different folder or drive, file path should be clearly specified along with image file name. In the above case, image file and HTML source file both are located within the same folder. So, path name is not mentioned.

For example, If the image file is somewhere in a folder (say Images folder in E: drive), you must specify its full path within double quotes as given below.

<body background = “E:\Images\ flower01.gif">

(iv) Setting Margins: margin = value

The margin refers the blank area from left or top edge of the browser window. Generally there is no default margin setting in any browser. If you want to leave some space as margin to left or top; **leftmargin** or **topmargin** attributes will be used respectively.

The tag to specify the left and top margin:

<body leftmargin = value topmargin = value>

The Value is referred as pixels (72 pixels to an inch)
