There are two important things needs to create a link in HTML,

(1) The name of the file or URL to which you want to link

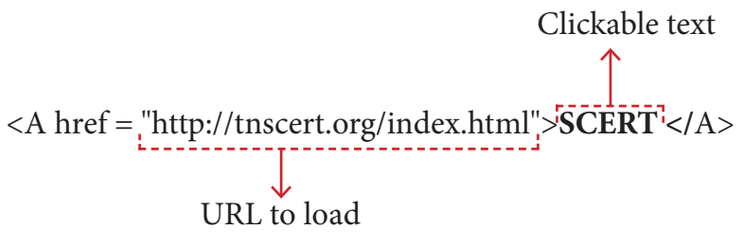
(2) The text that will serve as the clickable link.

The anchor tag **<A>** is used to create links along with HREF attribute. HREF is abbreviated as "Hypertext Reference".

Structure of an anchor tag with href:

<A href = " Web content path / URL "> Text – Clickable link </A>

Example:



The above link code creates the target of the hyperlink to the website http://thscert.org/index.html. At the time the user clicks the link, the browser opens the home page of the URL.

Internal Links:

Creating a link to a particular section of the same document is known as Internal Link. To create an internal like, the attribute Name is used along with **<A>** tag. The Name attribute of **<A>** tag establish the link to the content within the document.

Illustration 11.20: An HTML code to demonstrate Internal Linking:

```
<html>
<head>
<title> South India </title>
</head>
<body>
<h1 align = center> South India </h1>
<p> South India is the area encompassing the Indian states of
<A href = #AP> Andhra Pradesh, </A>
<A href = #KR> Karnataka, </A>
<A href = #KL> Kerala, </A>
<A href = #TN> Tamil Nadu </A> and Telangana as well as the union territories of Lakshadweep, Andaman and Nicobar Islands and Puducherry, occupying 19% of India's area (635,780 km2 or 245,480 sq mi). </p>
<A Name = AP><B> Andhra Pradesh </B> </A>
<p> Andhra Pradesh is one of the 29 states of India. Situated in the south-east of the country, it is the eighth-largest state in India. The largest city in Andhra Pradesh is Visakhapatnam.
</p>
<A Name = KR> <B> Karnataka </B> </A>
```
