12.1.2 Inserting Images with HTML document

The **<IMG>** tag along with the attribute src (Source) is used to add images in HTML document.

General format:

<img src = image_name_with_extension>

(OR)

<img src = URL>

Example:

<img src = image1.gif>

Src attribute is the main attribute used to specify the file name of the image to be inserted. If the image is not in the current working folder, the image file name should clearly specify with the path of the file or URL, where the file is available.

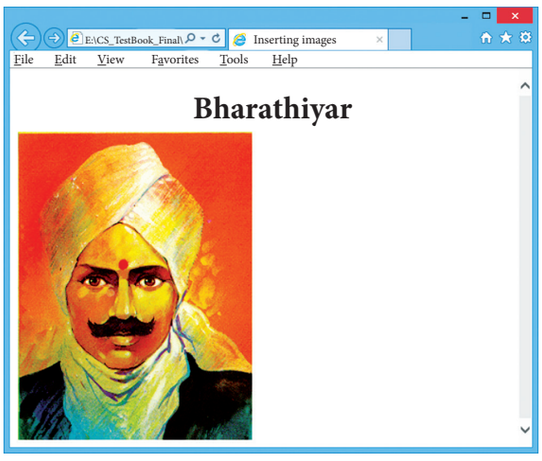

Example:

<img src = "D:\images\animals\cat.jpeg">

Illustration 12.1: An HTML code to insert an inline image

```
<html>
<head>
<title> Inserting Images </title>
</head>
<body>
        <h1 align = center> Bharathiyar </h1>
        <img src = bharathiyar.gif>
</body>
</html>
```

The output will be:
