Creating CSS style sheets:

- Open an empty **notepad.**
- Type the style properties and their values as given in the table given above.
- Save the file with extension **.css**

Illustration 13.1 My First CSS file

```
P {
font-style : Italic;
color :MediumSeaGreen;
}
H1
{
border:2px solid red;
}
```

The above code should be saved with extension .css

Linking CSS with HTML

The **<link>** tag is used to add CSS file with HTML in head section. While using **<link>** tag, the following attributes are also included along with standard values.

rel = "stylesheet"

type = "text/css"

The href attribute is used to link the .css file.

General format of <Link> tag

<Link rel = "stylesheet" type = "text/css" href = CSS_File_Name_with_Extension>

    CSS was invented by HakonWium Lie on October 10, 1994 and maintained through
    a group of people within the W3C called the CSS Working Group. The CSS Working
    Group creates documents called specifications. When a specification has been
    discussed and officially ratified by W3C members, it becomes a recommendation.
