Points to Remember:

- The <style> tag controls the presentation styles of a particular HTML document.
- The <style> tags are called as "Page-Level Styles" or "Internal Style sheets".
- Professional web developers do not use internal styles.
- The separate style files are known as "Sitewide Style sheets" or "External Style Sheets" or CSS
- CSS is easy to learn and understand but it provides powerful control over the presentation of an HTML document.
- Most commonly, CSS is combined with the markup languages HTML or XHTML.
- There is another style method called "Inline style" which is used to define style for a particular tag anywhere in an HTML document.
- Electronic governance or e-governance is the application of information and communication technology (ICT) for delivering government services.
