14.6.5 String Operators:

One of the built-in features of JavaScript is the ability to concatenate strings. The + operator performs addition on numbers but also serves as the concatenation operator for strings. Because string concatenation has precedence over numeric addition, + will be interpreted as string concatenation if any of the operands are strings. + operator which is also called as the string concatenation operator. For example:

Illustration 14.7 Using + Operator for concatenating String

```

        <Title>Demo Program - To Concatenating (+) Operators in JavaScript </Title>
</Head>
<Body>
        <script language="javascript" type="text/javascript">
        var String1 = "Java";
        var  String2 = "Script";
        var String3=String1+String2;
        document.write("<br>String1 : "+String1);
        document.write("<br>String2 : "+String2);
        document.write("<br><br>Concatenated String of String1 and String2 : "+String3);
</script>
</Body>
</Html>
```

Output:

14.6.6 Increment and Decrement Operators:

The ++ operator increments its single operand. The operator converts its operand to a number, adds 1 to that number, and assigns the incremented value back into the variable. The return value of the ++ operator depends on its position relative to the operand. When ++ is used before the operand, where it is known as the pre-increment operator, it increments the operand and evaluates to the incremented value of that operand. When used after the operand, where it is known as the post-increment operator, it increments its operand but evaluates to the un-incremented value of that operand. Consider the difference between these two lines of code:
