Output:

14.7 JavaScript Popup or Dialog Boxes:

JavaScript supports three important types of dialog boxes. Dialog boxes are also called as Popup Boxes. These dialog boxes can be used to raise an alert, or to get confirmation on any input or to have a kind of input from the users. JavaScript supports three kind of popup boxes: Alert box, Confirm box, and Prompt box.

14.7.1 Alert Dialog Box:

An **alert dialog box** is mostly used to give a warning message to the users. For example, if one input field requires to enter some text but the user does not provide any input, then as a part of validation, you can use an alert box to give a warning message. Alert box gives only one button **"OK"** to select and proceed.

The syntax of alert box is

Alert(“Message”);

(or) Window.alert(“Message”);

Example:

alert(“Name is compulsory entry”);

(or) window.alert(“Name is compulsory entry”);
