14.8 Comments in JavaScript:

Very important aspect of good programming style is to insert remarks and commentary directly in source code, making it more readable to yourself as well as to others. Any comments you include will be ignored by the JavaScript interpreter. There are two types of comments, **Single line** and **Multiple lines** comments. Single-line comments begin with a double slash (//), causing the interpreter to ignore everything from that point to the end of the line. Multiple line comments begins with /* and ends with */.

For example:

```
// JavaScript single line comment//
```

Multiple line comments begins with /* and ends with */

Points to Remember:

- The <script> tag alerts the browser program to start interpreting all the text between these tags as a script
- JavaScript is a case sensitive language
- The scope of a variable is the life time of a variable of source code in which it is defined
- A literal is a fixed value given to a variable in source code.
- An expression is a code fragment that can be evaluated to some data type the language supports.
- Java Script supports all basic arithmetic operators like +, - , *, / & %
- Java scripts has an in built feature of concatenating strings.
- The types of operator is used to get the data type of a variable.
- JavaScript supports important types of dialog boxes also called as pop up boxes, alert box, confirm dialog box and prompt dialog box.
- ?: is the conditional operator in Java Script also called as ternary operator.
