

15.2 Looping / repetitive

In JavaScript there are times when the same portion of code needs to be executed many times with slightly different values is called Loops. JavaScript supports three kinds of looping statements. They are

- **for** loop
- **while** loop
- **do..while** loop

15.2.1 for loop

The **for** loop is a very rigid structure that loops for a pre-set number of times. In JavaScript **for** structure is very flexible, which makes this type is very useful. The syntax of the **for** loop looks like the following:

```
for(initialization; condition; increment/decrement)
{
        Body of the loop;
}
```

The for structure within parenthesis there are three parts each separated by semicolon. They are,

1. The first part of the loop initialize a variable which is also called as control variable. In most case the control variable is declared as well as initialized.

2. The second part is the conditional statement that determines how many times the loop will be iterated.

3. The third and final part determines how the value of control variable is changed (Incremented/Decremented)
