to step 3

15.2.4 do .. while loop

The **do..while** loop is like a while loop, except that the loop expression is tested at the end of the loop rather than at the beginning. This means that the body of the loop is always executed at least once. The syntax is:

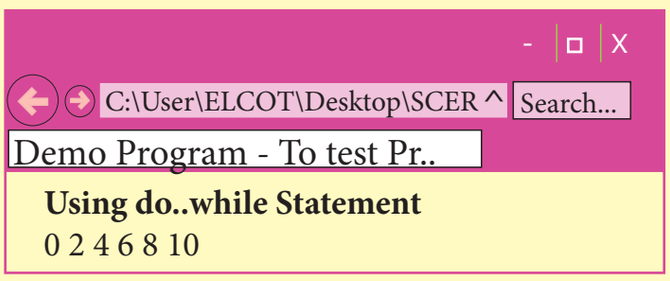

```
do
{
        body of the loop
} while (expression);
```

An important difference between while and do..while statement is in the do..while loop body of the loop always executed at least once before the condition can be executed. In a while loop, first condition will be evaluated and then only based on the result of the condition the body of the loop will be executed or not.

Illustration 15.9 Using do..while loop

```
<Html>
<Head>
        <Title>Program - To test do..while statement in JavaScript </Title>
</Head>
<Body>
        <script language="javascript" type="text/javascript">
        document.write("<h2> Using do..while Statement </h2>");
        var no2=0;
        do
{
document.write(no2+" ");
no2=no2+2;
}while(no2<=10);
</script>
</Body>
</Html>
```

Output:

Exercise

Write a JavaScript Program for the following:

a) To display Odd number from 1 to N numbers.
b) To display any Multiplication table as the user required.
c) To display as 10,9,8,……0
