Points to Remember:

- Conditional Statements help to alter the normal sequence of execution of a program by two types of controls - Branching and Looping.
- The three logical operators in Jave Script are &&, !! & !.
- The break statement is commonly used to exit the statement once the appropriate choice is found.
- The for is a very rigid, flexible structure that loops for a pre set number of times.
- The break statement terminates the loop irrespective of the condition and the continue statement executes the next iteration of the loop.

Evaluation

FNMEG1

Part-I

Choose the correct answers:

1. Which conditional statement is used to transfer control from current statement to another statement?
   (a) Branching (b) Sequencing (c) Looping (d) Interating

2. _____ statement can be used as alterative to if-else statement.
   (a) While (b) If (c) Else-if (d) Switch

3. Which statement in switch case is used to exit the statement once the appropriate choice is found?
   (a) Exit (b) Default (c) Case (d) Break

4. Which of the following is not a looping statement?
   (a) Switch (b) While (c) Do-While (d) For

5. Which part of the loop statement determines the number of times, the loop will be iterated? (MOT)
   (a) First (b) Second (c) Third (d) Final

6. Which of the following is not a branching statement?
   (a) Loop (b) If-else (c) Switch (d) For

7. What will be the output for the following snippet:

```
For (var n=0; n<10; n+1)
{
if (n==3)
{
break;
}
```
