Points to Remember:

- A function is a block of JavaScript code that is defined once but can be invoked for any number of times.
- There are 2 types of functions predefined and user defined functions
- Predefined functions are also called Library function
- User defined functions allow the programmer to modularize a program
- Larger programs divided into smaller are called modules.

Evaluation

FP66JB

Part-I

Choose the correct answer:

1. The parameters work as
   A) Local variable B) Global Variable
   C) File variable D) block variable
2. Predefined functions are also called as
   A)Library functions B) storage functions
   C) instructions D) commands
3. Larger programs are divided into smaller are called
   A) modules B) block
   C) sets D) Group
4. Which of the following is used to enhance reusability and program clarity.
   A) functions B) modules
   C) sets D) instructions
5. Which of the following allow the programmer to modu/arize a program
   A) Library functions B) user defined functions
   C) Normal functions D) Ordinary functions

Part – II

Very Short Answers

1. What is a function in JavaScript?
2. What is the use of function?
3. Write a note on Library functions.
4. Write a note on user defined functions.
5. Write the syntax of functions.

Part-III

Short Answers

1. Write a program in JavaScript to find the cube of a number using function
2. Write a program in JavaScript to find the sum of 10 numbers using function.

Case study

Display a menu as web page, Accept the choice as input and display the result using function. The menu to be displayed is

1. Sum of numbers upto a given limit
2. Sum of numbers from a starting limit to ending limit.
