- Sabotage in the form of viruses
- Making false claims using computers

CYBER CRIME

Cybercrime is an intellectual, white-collar crime. Those who commit such crimes generally manipulate the computer system in an intelligent manner.

For example – illegal money transfer via internet.

Examples of some Computer crimes and their functions are listed below in **Table 17.1:**

Table 17.1 Computer Crime

Crime	Function
Malware	Malicious programs that can perform a variety of functions including monitoring user's computer activity without their permission.
Harvesting	A person or program collects login and password information from a legitimate user to illegally gain acces s to others' account(s).
Spam	Distribute unwanted e-mail to a large number ofinternet users.

SOFTWARE PIRACY

Software Piracy is "unauthorized copying of software". **Figure 17.2** shows a diagrammatical representation of software piracy.

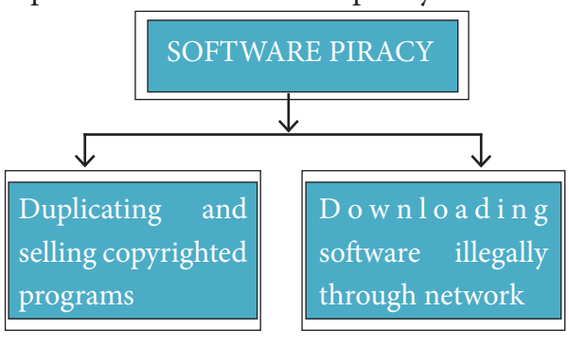

Figure 17.2- Diagrammatic representation of Software piracy

An entirely different approach to software piracy is called **Shareware**. Shareware publishers encourage users to give copies of programs to friends and colleagues but ask everyone who uses that program regularly to pay a registration fee to the program's author directly. Commercial programs that are made available to the public illegally are often called **Warez**.

HACKING

Hacking is intruding into a computer system to steal personal data without the owner's permission or knowledge (like to steal a password). It is also gaining unauthorized access to a computer system, and altering its contents. It may be done in pursuit of a criminal activity or it may be a hobby. Hacking may be harmless if the hacker is only enjoying the challenge of breaking systems' defenses, but such ethical hacking should be practiced only as controlled experiments. **Figure 17.3** shows a diagrammatic representation of Hacking.
