6.8.2 Line Spacing:

Line spacing determines the amount of **vertical space** between lines of text in a paragraph. By default, the lines are single-spaced, that is the spacing accommodates the largest font in that line, plus a small amount of extra space. In Open Office, setting line spacing is quite easy through the context menu, select the line or word or phrase, ***right-click → line spacing,*** select the type single, 1.5 or double. There are seven different types of line spacing as shown in the dialog box given below in Fig.6.23.

- Select the entire document by ***Edit → Select All***
- ***Format → paragraph***
- The paragraph dialog box appears, click **Indents & Spacing tab**
- In the **line spacing option**, select the type and click **OK** button.

6.8.3 Indenting text

Indent is the distance from the left and right margin of a paragraph. It is used to improve the efficiency and readability of the paragraph and makes the paragraph look more attractive. In paragraphs, an easy way to apply indent for the first line of text can be created by moving the insertion pointer to the begining of the line and pressing the **tab** key on the keyboard. There are four types of intentations:

- Left Indent
- Right Indent
- First Line Indent
- Hanging Indent.

Left indent - The Left indent controls the space between the paragraph and the left margin. This is the default indent. Each click on the **Increase indent** icon moves the paragraph ½ inch away from the left margin.

The left indent can also be applied by ***Format → Paragraph → Indents*** & ***Spacing*** tab, enter a value in the "**Before text**" spin box as shown Figure 6.23. This results in left indent.

Right Indent - The Right indent controls the space between the paragraph and the right margin. Each click on the **decrease indent** icon removes the indent applied by the Increase indent. The Right indent can be applied by using dialog box as shown in Figure 6.23.

Select ***Format → Paragraph → Indents*** & ***Spacing*** tab, enter a value in "**after text**" spin box. This results in right indent.

First Line Indent - This First-Line indentation indents the **first line** of the paragraph. It is the most common way to start a new paragraph.

This indent can be applied by ***Format → Paragraph → Indents*** & **Spacing** tab, select **First line** option in the Figure 6.23, enter a **positive** value which results in first line indent.
