polygon. Frequency curve provides better understanding about the properties of the data than frequency polygon and histogram.

Example 4.13

The ages of group of pensioners are given in the table below. Draw the Frequency curve to the following data.

Age	65 - 70	70 - 75	75 - 80	80 - 85	85 - 90
No.of pensioners	38	45	24	10	8

Solution:

Since we are displaying the distribution of Age and Number of Pensioners, the Frequency curve is drawn, to provide better understanding about the age and number of pensioners than frequency polygon.

The following procedure can be followed to draw frequency curve:

Step 1 : Age are marked along the *X*-axis and labeled as 'Age'.

Step 2 : Number of pensioners are marked along the *Y*-axis and labeled as 'No. of Pensioners'.

Step3 : Mark the midpoints at the top of each vertical bar in the histogram representing the age.

Step 4 : Connect the midpoints by line segments by smoothing the vertices of the frequency polygon

The Frequency curve is presented in Fig 4.11.
