(i) Median = ₹ 113

(ii) 183 workers get daily wages less than ₹ 125

Example 4.15

The following table shows the marks obtained by 120 students of class IX in a cycle test-I . Draw the more than Ogive curve for the following data :

Marks	0-10	10-20	20-30	30-40	40-50	50-60	60-70	70-80	80-90	90-100
No. of students	2	6	8	20	30	22	18	8	4	2

Also, find

(i) The Median

(ii) The Number of students who get more than 75 marks.

Solution:

Since we are displaying the distribution marks and No. of students, the more than Ogive curve is drawn, to provide better understanding about the marks of the students and No. of students.

The following procedure can be followed to draw More than Ogive curve:

Step 1 : Marks of the students are marked along the *X*-axis and labeled as 'Marks'.

Step 2 : No. of students are marked along the *Y*-axis and labeled as 'No. of students'.

Step 3 : Find the more than cumulative frequency, by taking the lower class-limit of marks. The cumulative frequency corresponding to any lower class-limit of marks is the sum of all the frequencies above the limit of marks.

Step 4 : The more than cumulative frequency of number of students are plotted as points against the marks (lower-limit). These points are joined to form more than ogive curve.

The More than Ogive curve is presented in Fig 4.13.

Marks More than	**No of Students**
0	120
10	118
