- Percentage bar diagram is another form of component bar diagram. Here, the heights of the components do not represent the actual values, but percentages.
- The Pie diagram is a circular diagram. As the diagram looks like a pie, it is given this name. A circle which has 360° is divided into different sectors. Angles of the sectors, subtending at the center, are proportional to the magnitudes of the frequency of the components.
- Pictograms are diagrammatic representation of statistical data using pictures of resemblance. These are very useful in attracting attention.
- Histogram is an attached bar chart or graph displaying the distribution of a frequency distribution in visual form.
- Frequency curve is a smooth and free-hand curve drawn to represent a frequency distribution.
- Cumulative frequency curve (Ogive) is drawn to represent the cumulative frequency distribution. There are two types of Ogives such as '*less than*Ogive curve' and '*more than*Ogive curve'.
- If both the curves are drawn in the same graph, then the value of x-coordinate in the point of intersection is the median.

EXERCISE 4

BACYN6

I. Choose the best answer:

1. Which one of the following diagrams displays the class frequencies at the same height?

   (a) Simple bar diagram (b) percentage bar diagram
   (c)Sub-divided bar diagram (d) multiple bar diagram

2. Which one of the following diagrams use pictures to present the data?

   (a) Pictogram (b) Pareto Diagram (c) Pie diagram (d) Histogram

3. In which one of the following diagrams, data is transformed into angles?

   (a) Pictogram (b) Pareto Diagram (c) Pie diagram (d) Histogram

4. In which one of the following diagrams, bars are arranged in the descending order of their heights?

   (a) Pictogram (b) Pareto Diagram (c) Pie diagram (d) Histogram

5. The bars are _____ in multiple bar diagrams.

   (a) Sub-divided (b) placed adjacently
   (c) placed adjacently and sub-divided (d) sub-divided and are of equal height
