Measures of Central Tendency

Sir Francis Galton

(16 Feb, 1822- 14 Jan, 1911)

Sir Francis Galton, born in England was a statistician, sociologist, psychologist anthropologist, eugenicist, tropical explorer, geographer, inventor, meteorologist, and psychometrician. Galton produced over 340 papers and several books. He also created the statistical concept of correlation and regression. He was the first to apply statistical methods to the study of human differences and inheritance of intelligence, and introduced the use of questionnaires and surveys for collecting data on human communities.

As an initiator of scientific meteorology, he devised the first weather map, proposed a theory of anticyclones, and was the first to establish a complete record of short-term climatic phenomena on a European scale. He also invented the Galton Whistle for testing differential hearing ability.

'The inherent inability of the human mind to grasp in it's entirely a large body of numerical data compels us to see relatively few constants that will adequately describe the data'.

- Prof. R. A. Fisher

Learning Objectives

BALUPT

- Knows the average as the representation of the entire group
- Calculates the mathematical averages and the positional averages
- Computes quartiles, Deciles, Percentiles and interprets
- Understands the relationships among the averages and stating their uses.

Introduction

Human mind is incapable of remembering the entire mass of unwieldy data.Having learnt the methods of collection and presentation of data, one has to condense the data to
