

The median value from the graph is 42

Merits

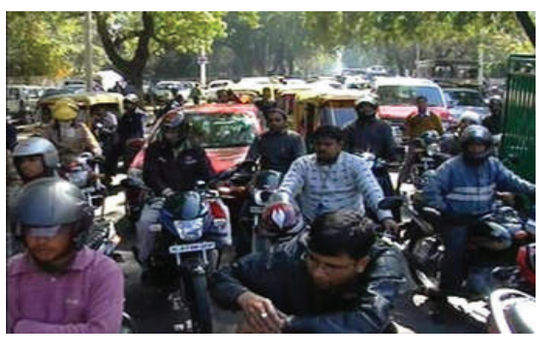

- It is easy to compute. It can be calculated by mere inspection and by the graphical method
- It is not affected by extreme values.
- It can be easily located even if the class intervals in the series are unequal

Limitations

- It is not amenable to further algebraic treatment
- It is a positional average and is based on the middle item
- It does not take into account the actual values of the items in the series

5.3.5 Mode

According to Croxton and Cowden, 'The mode of a distribution is the value at the point around which the items tend to be most heavily concentrated'.

In a busy road, where we take a survey on the vehicle - traffic on the road at a place at a
