- Median is the middle value of the series when arranged in ascending order
- When a series is divided into more than two parts, the dividing values are called partition values.
- Mode is the value which occurs most frequently in the series,that is modal value has the highest frequency in the series.

EXERCISE 5

BAVQRG

I. Choose the best answer:

1. Which of the following is a measure of central value?

   (a) Median (b) Deciles

   (c) Quartiles (d) Percentiles

2. Geometric Mean is better than other means when

   (a) the data are positive as well as negative

   (b) the data are in ratios or percentages

   (c) the data are binary

   (d) the data are on interval scale

3. When all the observations are same, then the relation between A.M., G.M. and H.M. is:

   (a) A.M. = G.M. = H.M. (b) A.M. < H.M. < G.M.

   (c) A.M. < G.M. < H.M. (d) A.M. > G.M. > H.M.

4. The median of the variate values 11, 7, 6, 9, 12, 15, 19 is

   (a)9 (b)12 (c)15 (d)11

5. The middle values of an ordered series is called

   (a) 50th percentile (b) 2nd quartile

   (c) 5th decile (d) all the above

6. Mode is that value in a frequency distribution which possesses

   (a) minimum frequency (b) maximum frequency

   (c) frequency one (d) none of the above
