EXERCISE : 6

I. Choose the best answer:

1. When a distribution is symmetrical and has one mode, the highest point on the curve is called the

   (a) Mode (b) Median (c) Mean (d) All of these.

2. When referring to a curve tails to the left end, you would call it.

   (a) Symmetrical (b) Negatively skewed
   (c) Positively skewed (d) All of these

3. Disadvantages of using the range as a measure of dispersion include all of the following except

   (a) It is heavily influenced by extreme values

   (b) It can change drastically from one sample to the next

   (c) It is difficult to calculate

   (d) It is determined by only two points in the data set.

4. Which of the following is true?

   (a) The variance can be calculated for grouped or ungrouped data.

   (b) The standard deviation can be calculated for grouped or ungrouped data.

   (c) The standard deviation can be calculated for grouped or ungrouped data but the variance can be calculated only for ungrouped data.

   (d) (a) and (b), but not (c).

5. The squareroot of the variance of a distribution is the

   (a) Standard deviation (b) Mean
   (c) Range (d) Absolute deviation

6. The standard deviation of a set of 50 observations in 8. If each observation is multiplied by 2, then the new value of standard deviation will be:

   (a) 4 (b) 2 (c)16 (d) 8

7. In a more dispersed (spread out) set of data:

   (a) Difference between the mean and the median is greater

   (b) Value of the mode is greater
