IV Answer in brief:

22. Explain dispersion and write their uses?

23. What are the requisites of a good measure of variation?

24. Explain how measures of central tendency and measures of variations are complementary to each other in the context of analysis of data.

25. Distinguish between absolute and relative measures of variation. Give a broad classification of the measures of variation.

26. Explain and illustrate how the measures of variation afford a supplement to averages in frequency distribution.

27. What you understand by 'coefficient of variation?' Discuss its importance in business problems.

28. When is the variance equal to the standard deviation? Under what circumstances can variance be less than the standard deviation?

29. A retailer uses two different formulas for predicting monthly sales. The first formula has an average of 700 records, and a standard deviation of 35 records. The second formula has an average of 300 records, and a standard deviation of 16 records. Which formula is relatively less accurate?

30. In a small business firm, two typists are employed-typist A and typist B. Typist A types out, on an average, 30 pages per day with a standard deviation of 6. Typist B, on an average, types out 45 pages with a standard deviation of 10. Which typist shows greater consistency in his output?

V Calculate the following:

31. Calculate mean deviation about mean for the following frequency distribution:

Age in Years	1-5	6-10	11-15	16-20	21-25	26-30	31-35	36-40	41-45
No.of persons	7	10	16	32	24	18	10	5	1

32. The mean of two sample sizes 50 and 100 respectively are 54.1 and 50.3 and the standard deviations are 8 and 7. Find the mean and standard deviation of the sample size of 150 obtained by combining the two samples.
