ICT CORNER

MOMENTS OF NORMAL CURVE

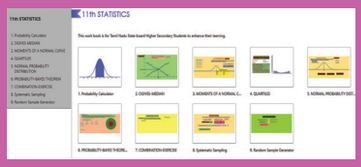

This activity helps to understand what is moments in probability using normal probability distribution

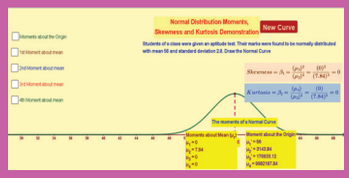

Steps:

- Open the browser and type the URL given (or) scan the QR code. GeoGebra work book called "11th Standard Statistics" will appear. In this several work sheets for statistics are given, open the worksheet named "Moments of Normal Curve"
- Normal curve will appear. You can change the normal curve by pressing on "New Curve". Observe the changes.
- You have to observe that for normal curve skewness and kurtosis is always zero. First you observe the calculation on the screen by changing the curve as in step-2. The reason you can find in next steps.
- First click on "Moments about the origin" check box. You can see the graph for moments about the origin in different colours. You get various values for moment about the origin. Observe the data at right bottom.
- If you click on "2nd moment about Mean" check box you see the curve is entirely on the top and it has some value.
- If you click on 1st, 3rd and 4th moment about mean you get top and bottom equal curves which are positive and negative. That is why these values are zero. That is why skewness and kurtosis formula lead to zero. (Observe)
