Merits:

- The selection of the sample in this method is quick, easy and cheaper.
- May control sample characteristics.
- More chance of representative.

Limitations:

- Selection bias.
- The sample is not a true representative and statistical properties cannot be applied.

Example 2.4

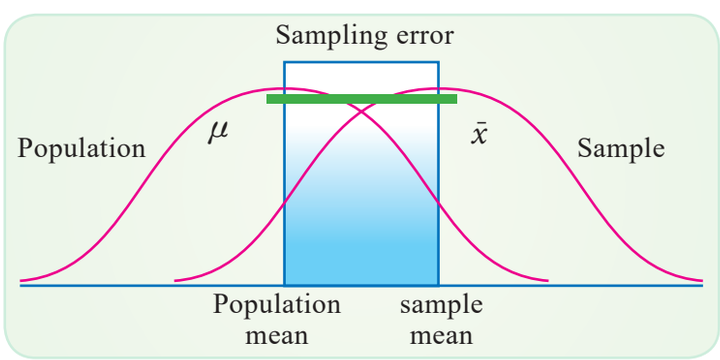

A selection committee wants to compose a cricket team (11 players) for a test match.

Groups	Pace bowlers	Spinners	All-rounders	Batsmen	Wicket keepers
	Players in this category	Players in this category	Players in this category	Players in this category	Players in this category
Quota	2	3	3	2	1
Select the players using judgment sampling to fulfill the requirement of the respective quota.					

In the composition of a cricket team, the selection committee forms groups compartmentalize as pace bowlers, spinners, all-rounders, batsmen and wicket keepers. The committee fixed quota for each group based on the pitch and the opponent teams' strength. Then, from each group they select the required number of players using judgement. Look the table.

2.9 Sampling and Non-sampling errors

2.9.1 Sampling error

The purpose of sample is to study the population characteristics. The sample size is not equal to population size except in the case complete enumeration. Therefore, the statistical measurements like mean of the sample and mean of the population differ.
