(v) **Foot Note:** The explanatory notes should be given as foot notes and must be complete in order to understand them at a later stage.

(vi) **Source of Data:** It is always customary to provide source of data to enable the user to refer the original data. The source of data may be provided in a foot note at the bottom of the table.

A typical format of a table is given below:

Table Number

Title of the Table

Stub heading	Caption (Column headings)	Total
Stub (Row entries)	Body	
Total		

Foot note (if any)

Source of Data (if any)

General Precautions for Tabulation

The following points may be considered while constructing statistical tables:

- A table must be as precise as possible and easy to understand.
- It must be free from ambiguity so that main characteristics from the data can be easily brought out.
- Presenting a mass of data in a single table should be avoided. Displaying the data in a single table would increase the chances for occurrence of mistakes and would make the table unwieldy. Such data may be presented in more than one table such that each table should be complete and should serve the purpose.
- Figures presented in columns for comparison must be placed as near to each other as possible. Percentages, totals and averages must be kept close to each other. Totals to be compared may be given in bold type wherever necessary.
- Each table should have an appropriate short and self- explanatory title indicating what exactly the table presents.
- The main headings and subheadings must be properly placed.
- The source of the data must be indicated in the footnote.
- The explanatory notes should always be given as footnotes and must be complete in order to understand them at a later stage.
