1.01, 1.03, 1.06, 1.08
1.11, 1.13, 1.14, 1.19
1.21
1.39
1.44

Step 3: Now construct the stem and leaf plot for the above data.

Stem (Leading digits)	Leaves (Trailing digits)
0.7	2 3 9
0.8	8
0.9	1 1 4 8 9
1.0	1 3 6 8
1.1	1 3 4 9
1.2	1
1.3	9
1.4	4

NOTE

Stem and Leaf diagrams normally have one set of leaves for any stem value but either two or more sets of leaves are possible.

Using a Stem and Leaf plot, finding the Mean, Median, Mode and Range

We know how to create a stem and leaf plot. From this display, let us look at how we can use it to analyze data and draw conclusions. First, let us recall some statistical terms already we used in the earlier classes.

- The mean is the data value which gives the sum of all the data values, divided by the number of data values.
- The median is the data value in the middle when the data is ordered from the smallest to the largest.
- The mode is the data value that occurs most often. On a stem and leaf plot, the mode is the repeated leaf.
- The range is the difference between the highest and the least data value.

Example 3.18

Determine the mean, median, mode and the range on the stem and leaf plot given below:

Stem	Leaf
25	2 5
26	0 2
27	6 6 6
28	3 9
29	8
