Chapter

# 4

# Diagrammatic and Graphical Representation of Data

**William Palyfair**
**(22 Sep, 1759- 11 Feb, 1823)**

William Playfair was a Scottish engineer and political economist, the founder of graphical methods of statistics.

He invented several types of diagrams: In 1786, the line, area and bar chart of economic data, and in 1801 the pie chart and circle graph, used to show part-whole relations.

**'Good statistical inference never strays very far from data'**
**- Brian S Yandell**

## Learning Objectives

- Presents the data in diagrams
- Understands the various types of diagrams
- Compares the tabular data with diagrammatic representation of data
- Represents the data in a graph
- Enumerates the unknown value using graphs
- Distinguishes diagrammatic and graphical representation of data

## Introduction

In the preceding unit, we discussed the techniques of classification and tabulation that help in condensing and presenting the data in a tabular form. These ways of presentation of data in numbers is dull and uninteresting to the common man. For that,
