

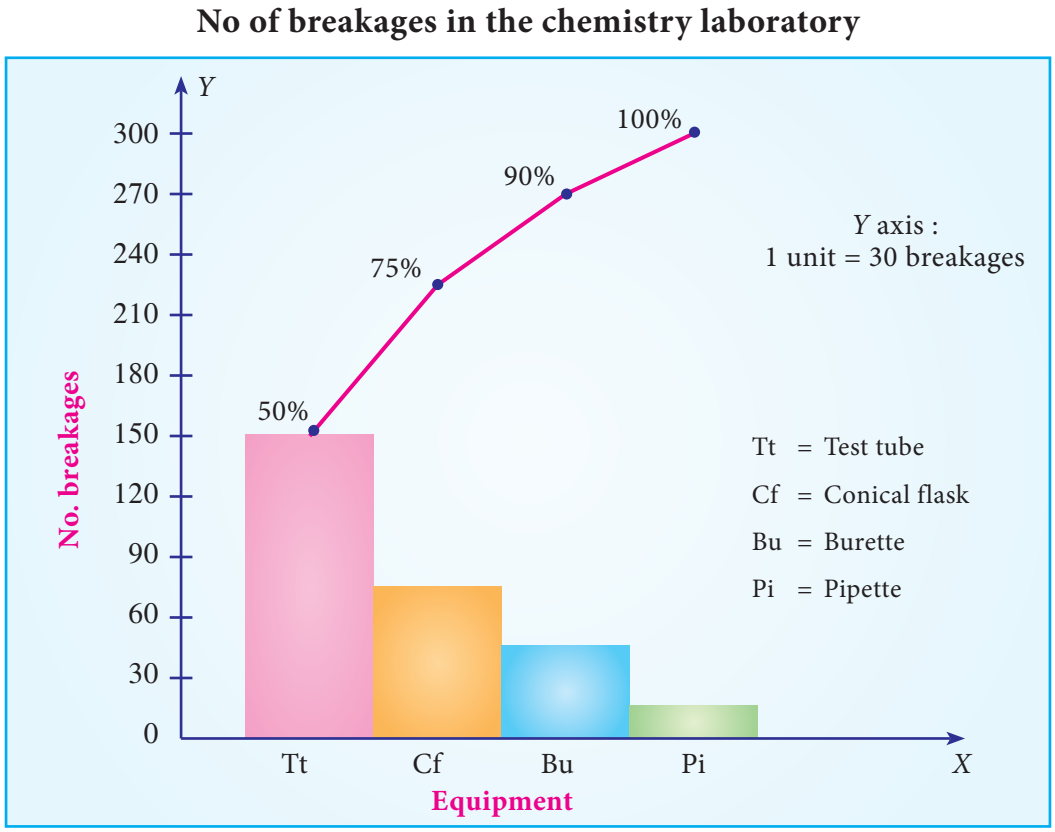

Fig 4.2: Pareto Diagram for No. of Breakages in the Chemistry Laboratory

From Fig 4.2, it can be found that 50% of breakages is due to Test tube, 25% due to Conical Flask. Therefore, the School Administration has to focus more attention on reducing the breakages of Test Tubes and Conical Flasks.

4.3.3 Multiple Bar Diagram

Multiple bar diagram is used for comparing two or more sets of statistical data. Bars with equal width are placed adjacently for each cluster of values of the variable. There should be equal space between clusters. In order to distinguish bars in each cluster, they may be either differently coloured or shaded. Legends should be provided.

Example 4.3

The table given below shows the profit obtained before and after tax payment(in lakhs of rupees) by a business man on selling cars from the year 2014 to 2017.

Year	Profit before tax	Profit after tax
2014	195	80
2015	200	87
2016	165	45
2017	140	32

(i) Construct a multiple bar diagram for the above data.

(ii) In which year, the company earned maximum profit before paying the tax?
