(iii) In which year, the company earned minimum profit after paying the tax?

(iv) Find the difference between the average profit earned by the company before paying the tax and after paying the tax.

Solution:

Since we are comparing the profit earned before and after paying the tax by the same Company, the multiple bar diagram is drawn. The diagram is drawn following the procedure presented below:

Step 1 : Years are marked along the X-axis and labeled as "Year".

Step 2 : Values of Profit before and after paying the tax are marked along the Y-axis and labeled as "Profit (in lakhs of ₹)".

Step 3 : Vertical rectangular bars are erected on the years marked, whose heights are proportional to the respective profit. The vertical bars corresponding to the profit earned before and after paying the tax in each year are placed adjacently.

Step 4 : The vertical bars drawn corresponding to the profit earned before paying the tax are filled with one type of colour. The vertical bars drawn corresponding to the profit earned after paying the tax are filled with another type of colour. The colouring procedure should be applied to all the years uniformly.

Step 5 : Legends are displayed to describe the different colours applied to the bars drawn for profit earned before and after paying the tax.

The multiple bar diagram is presented in Fig 4.3.
