

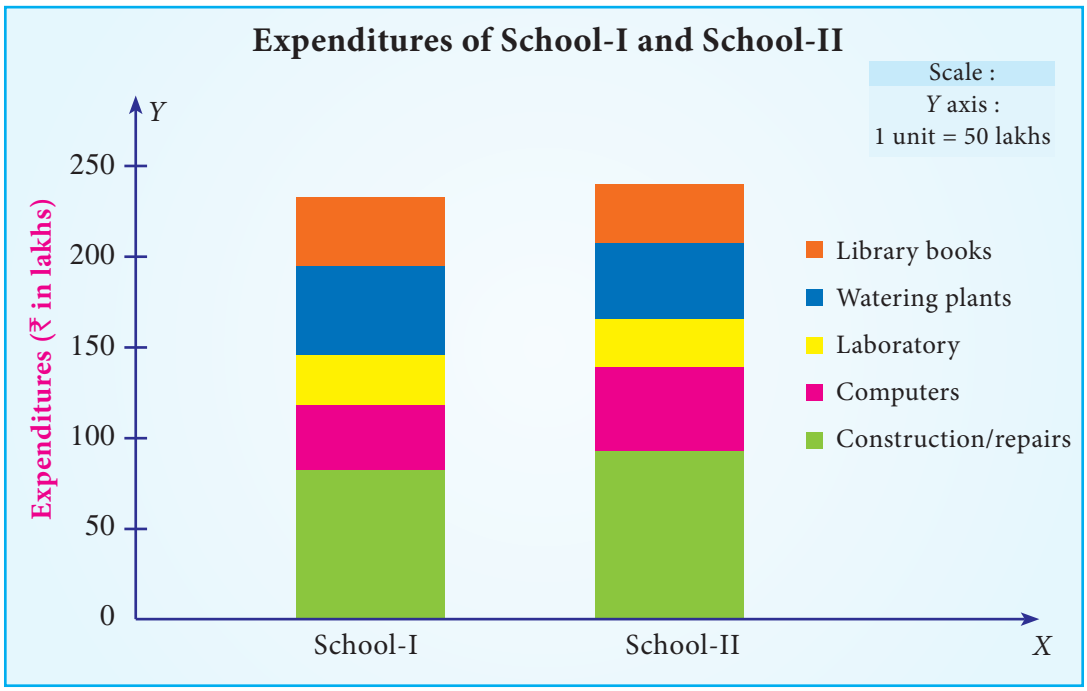

Fig 4.4 Component Bar diagram for expenditures of School I and School II

(i) School- II had spent more amount towards Construction/Repairs.

(ii) School- I had spent more amount towards Watering plants.

4.3.5 Percentage Bar Diagram

Percentage bar diagram is another form of component bar diagram. Here, the heights of the components do not represent the actual values, but percentages. The main difference between sub-divided bar diagram and percentage bar diagram is that, in the former, the height of the bars corresponds to the magnitude of the value. But, in the latter, it corresponds to the percentages. Thus, in the component bar diagram, heights of the bars are different, whereas in the percentage bar diagram, heights are equal corresponding to 100%. Hence, percentage bar diagram will be more appealing than sub-divided bar diagram. Also, comparison between components is much easier using percentage bar diagram.

Example 4.5

Draw the percentage sub-divided bar diagram to the data given in Example 4.4. Also find

(i) The percentage of amount spent for computers in School I

(ii) What are the expenditures in which School II spent more than School I.
