

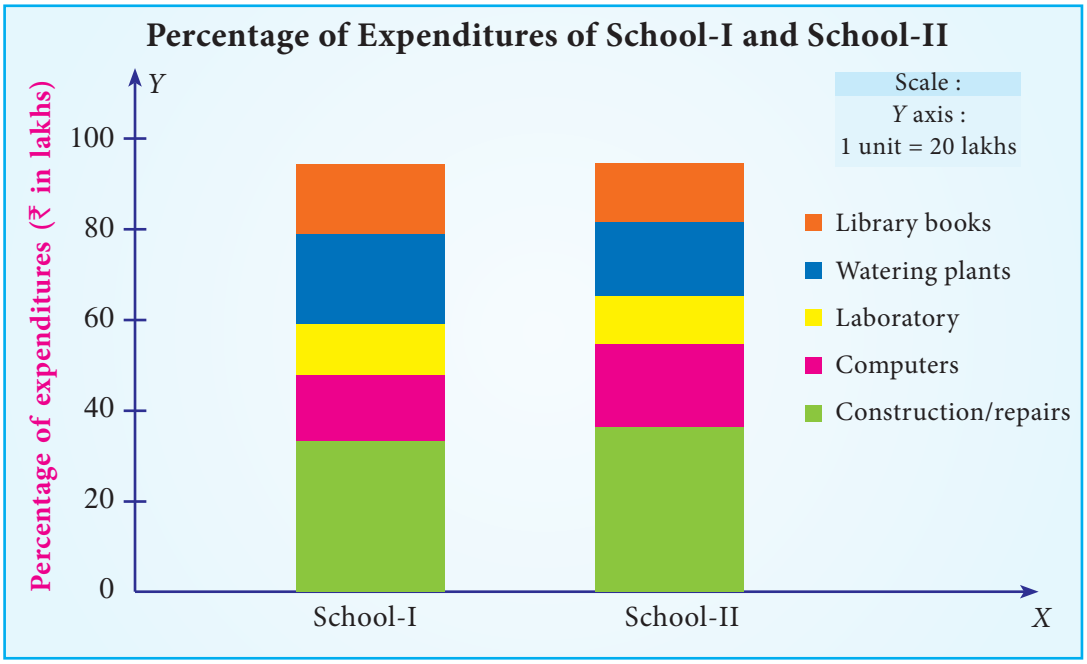

Fig 4.5 Percentage Bar diagram for expenditures of School I and School II

(i) 21% of the amount was spent for computers in School I

(ii) 38% of expenditure was spent for construction/Repairs by School II than School I.

4.3.6 Pie Diagram

The Pie diagram is a circular diagram. As the diagram looks like a pie, it is given this name. A circle which has 360° is divided into different sectors. Angles of the sectors, subtending at the center, are proportional to the magnitudes of the frequency of the components.

Procedure:

The following procedure can be followed to draw a Pie diagram for a given data:

(i) Calculate total frequency, say, N.

(ii) Compute angles for each component using the formula. $\frac{class\ frequemcy}{N} \times 360$

(iii) Draw a circle with radius of sufficient length as a horizontal line.

(iv) Draw the first sector in the anti-clockwise direction at an angle calculated for the first component.

(v) Draw the second sector adjacent to the first sector at an angle corresponding to the second component.
