 = 100 persons

From the Pictogram find:

(i) Number of travelers travelled during the week

(ii) On which day there was a maximum rush in the train

(iii) The difference between the maximum and minimum number of travelers.

Solution :

(i) Here total number of  is 48, and each  represents 100 persons.

Hence number of travelers travelled during the week is 48×100=4800 .

(ii) The maximum rush in the train is on Thursday.

(iii) Maximum number of persons travelled on Thursday = 10

Hence the number of persons travelled on Thursday is 10×100 = 1000

Minimum number of persons travelled on Wednesday = 4

Hence the number of persons travelled on Wednesday is 4×100=400

Therefore difference between maximum and minimum number of travelers is 1000-400=600 persons.

4.4 Types of Graphs

Graphical representation can be advantageous to bring out the statistical nature of the frequency distribution of quantitative variable, which may be discrete or continuous.
