More than 50% of the global natural gas reserves are found in United States of America, Russia, Iran and Qatar.

In India, Krishna and Godavari Delta, Assam, Gujarat and some areas of offshore in Mumbai have natural gas resources.

Wrap up

- Natural resources are obtained from environment.
- Renewable resources can be used repeatedly and replaced naturally.
- Non-renewable resources once consumed, cannot be replaced.
- Solar energy is not harmful to the environment.
- Hydroelectricity is generated from moving water with high velocity and great falls with the help of a turbines and dynamos.
- Metallic resources are iron, copper, gold, bauxite, silver, manganese etc.
- Non-metallic resources are mica, limestone, gypsum, dolomite, phosphate, etc.
- Fossil fuels resources are normally formed from the remains of dead plants and animals.

Glossary

1.	Biotic resources	obtained from living and organic materials	உயிரியல் வளங்கள்
2.	Abiotic resources	obtained from non-living, non-organic materials	உயிரற்ற வளங்கள்
3.	Hydroelectricity	generated from moving water with high velocity and great falls with the help of turbines and dynamos	நீர் மின் சக்தி
4.	Metallic resources	resources that are composed of metals	உலோக வளங்கள்
5.	Non-metallic resources	resources that do not comprise of metals	உலோகம் அல்லாத வளங்கள்
6.	Duralumin	a hard, light alloy of aluminium with copper and other elements	துராலுமின்
7.	Fossil fuel	formed from the remains of dead plants and animals	படிம எரிபொருள்
8.	Thermal Power	Electricity produced from coal	அனல் மின் சக்தி
9.	Black Gold	Petroleum and its derivatives	கருப்புத் தங்கம்
10.	Precious metal	a metal that is valuable and usually rare	விலை மதிப்பற்ற உலோகம்
