ACTIVITY 3

Summarise what you have learnt

Now you've studied the internal structure of a cell. Let us summerise what we have learnt so far Complete this table by filling the main function of each of the cell structures

S.No	Cell Structure	Function(s)
1	Cell membrane	
2	Cell wall	
3	Cytoplasm	
4	Mitochondria	
5	Vacuole	
6	Chloroplast	
7	Endoplasmic reticulum	

Red blood cells

Red blood cells do not contain a nucleus. Without a nucleus, these cells die quickly; about two million red blood cells die every second! Luckily, the body produces new red blood cells every day.

POINTS TO REMEMBER

- Cells are the basic structural and functional units of all living organisms.
- Cells are microscopic and can be seen only under a microscope.
- Cell membranes are selectively permeable, which means they only allow certain substances to pass in and out of the cell.
- Plant cells have a cell wall around the cell membrane that is rigid and provides support and protection to the cell content.
- The Cytoplasm includes the organelles and the cytosol. The Cytosol is the jelly-like medium, in which many chemical reactions take cell. Everything inside the cell membrane, except the nucleus, is considered to be the cytoplasm.
- Mitochondria are responsible for cellular respiration, which releases the energy from the food.
- Plants have chloroplasts with chlorophyll pigments to produce food by photosynthesis.
- Stem cells are cells that have the ability to divide and develop into many different types of the cell.
- A group of different tissues makes up an organ.
- Organs working together in groups form a systems or organ systems.
- Organ systems make up an organism, such as a human.

Evaluation

J5H2R8

I. Choose the correct answer

1. Basis unit of life.
   A) Cell
   B) Protoplasm
   C) Cellulose
   D) Nucleus

2. I am the outer most layer of an animal cell. Who am I?
   A) Cell wall B) Nucleus
   C) Cell membrane D) Nuclear membrane
