DO YOU KNOW?

**Aristotle** was a Greek philosopher and thinker who lived about 2400 years ago. Aristotle came up with the following grouping system that was used for almost 2000 years after his death!

- He classified all organisms into either animals or plants.
- Then he classified into those 'with blood' and those 'without blood'.
- Then the animals are classified into three groups based on their method of movement: walkers, flyers or swimmers.

## ACTIVITY 1

**Aim :** To sort out a box of given buttons and classify them into different types.

**Materials Required :** A box full of different types of buttons.

**Procedure:**

1. Take a box of given buttons.
2. Work in small groups of three or four and classify the buttons based on the following classification criteria.
   (i) Shape
   (ii) Buttons with four holes
   (iii) Buttons with two holes.
   (iv) Colour
3. Identify other features that can be used to sort out buttons into different groups.

Based on the, special features and characters, the students identify each button, according to its size, hole and colour. This is known as identification. Then teacher shall ask students to separate the buttons according to the size, hole and colours. This is known as assortment.

After assorting the buttons the teacher ask the students to gather the buttons according to their, size, hole and colours. This is termed as grouping. Identification, assortment and grouping, which results in classification

## Classification:

The method of arranging the organisms into groups is called classification. When we classify things we put them into groups based on their characteristics.

## Why do we classify things?

1. Classifying things makes it easy for us to know their similarities and differences.
2. Things with similar characters are classified into same group. These things are usually similar in at least one characteristic.
3. Things with different characteristics are classified into different groups. These things are usually different in at least one characteristic.
4. Classification helps us to understand, living and non – living things in better way. For example, we can classify a newly discovered organism, we would come to know, how it relates with other.

## Need for Classification

- ❖ Classification is needed to identify an organism correctly.
- ❖ It helps to know the origin and evolution of an organism.
- ❖ To establish the relationship among different organisms.
