The symbiotic association between the roots of higher plants and fungal mycelium is called mycorrhizae. Lichen thallus includes both phycobiont and mycobiont. It is an example for symbiotic association.

Evaluation

1. Which one of the following statement about virus is correct?
   a. Possess their own metabolic system
   b. They are facultative parasites
   c. They contain DNA or RNA
   d. Enzymes are present

2. Identify the incorrect statement about the Gram positive bacteria
   a. Teichoic acid absent
   b. High percentage of peptidoglycan is found in cell wall
   c. Cell wall is single layered
   d. Lipopolysaccharide is present in cell wall

3. Identify the Archaebacterium
   a. *Acetobacter* b. *Erwinia*
   c. *Treponema* d. *Methanobacterium*

4. The correct statement regarding Blue green algae is _____
   a. lack of motile structures
   b. presence of cellulose in cell wall
   c. absence of mucilage around the thallus
   d. presence of floridean starch

5. Identify the correctly matched pair
   a. Actinomycete – a) Late blight
   b. Mycoplasma – b) lumpy jaw
   c. Bacteria – c) Crown gall
   d. Fungi – d) sandal spike

6. Differentiate homoiomerous and heteromerous lichens.
7. Write the distinguishing features of monera.
8. Why do farmers plant leguminous crops in crop rotations/mixed cropping?
9. Briefly discuss on five Kingdom classification. Add a note on merits and demerits.
10. Give a general account on lichens.
11. Write the outline of the life cycle of *Agaricus*.
12. What is Sterigma?
13. Name the types of mycelium found in *Agaricus*.
14. Differentiate oidium and Chlamydospore.
15. Name the fungal group which possess dolipore septum.
16. Mention the diseases caused by fungi in plants.
17. Give two examples for mycorrhizae forming fungi.
18. Differentiate Gram positive and Gram negative bacteria.
