4.5.4 Extension of the condensed internode of the receptacle

1. Anthophore:The internodal elongation between calyx and corolla. Example: caryophyllaceae (*Silene conoidea*)

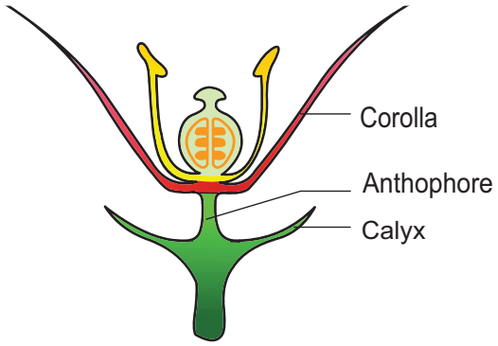

Figure 4.24: (a) Anthophore

2. Androphore: The internodal elongation between the corolla and androecium. Example: *Grewia*.

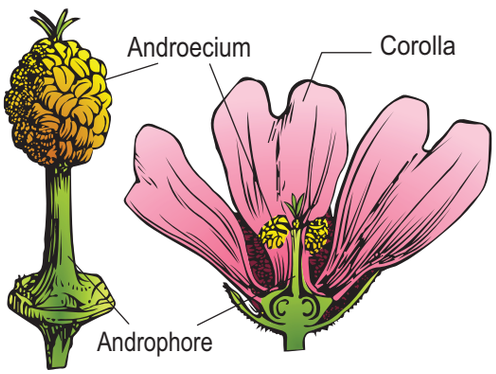

Figure 4.24: (b) Androphore

3. Gynophore: The internodal elongation between androecium and gynoecium. Example: *Capparis*.

Figure 4.24: (c) Gynophore

4. Gynandrophore or **Androgynophor**e: The unified internodal elongation between corolla and androecium and androecium and gynoecium. Example: *Gynandropsis*.

Figure 4.24: (d) Androgynophore

4.5.5 Ovary position

The position or attachment of ovary relative to the other floral parts. It may be classified into

1. **Superior ovary:** It is the ovary with the sepals, petals and stamens attached at the base of the ovary.

2. **Inferior ovary:** It is the ovary with the sepals, petals and stamens attached at the apex of the ovary.

3. **Half-inferior ovary:** It is the ovary with the sepals, petals and stamens or hypanthium attached near the middle of the ovary.
