**Marvin R.Gore** remarked that business is a system that has its output goals and objectives and the business can be divided into small systems that vary according to the organization of the business.

**George R.Terry** says that each business has a number of sub-systems like production control system, marketing system, office system and so on. Thus, office system itself is a sub-system of the whole business.

Office systems are the continuation of several procedures integrated together in such a way as to attain the needed objectives. It is defined as a network of routines, which are designed and integrated to carry out office work. In other words Systems comprises of various interconnected routines.

### 7.1.2. Definition of System:

According to **Miltion Reitzfeld** "Success in business, government and non-profit venture is determined by the maximum utilization of people, information and resources. Such utilities can be achieved only through the development, installation and supervision of appropriate systems and procedure"

According to **Terry**," A system is a network of procedures which are integrated and designed to carry out the major activity".

According to **Littlefield**, A system may be defined as," a ground of interrelated and interdependent parts operating in sequence according to a predetermined plan in order to achieve a goal or a series of goals"

### 7.1.3. Principles of Office Systems:

Every office has its own systems. The systems are not identical in all offices. They vary with the type and size of business. However, whatever system is evolved, it should ensure maximum efficiency. Following are some of the important principles of office systems.

1. Good flow of work without bottlenecks should be ensured.
2. Unnecessary duplication of work and records should be avoided.
3. Movement of staff should be kept to a minimum.
4. Unnecessary writing would be avoided.
5. Best use of specialization should be made.
6. The amount of paper work should be the absolute minimum.
7. The principle of management by exception should be used.
8. Only a few exceptions to the functional procedure should be allowed.
9. Unnecessary checking should be avoided.
10. Possibilities to make best use of machines should be provided.
11. The system should be simple and easy to understand.
