7.2 Flow of Work:

Fig. 7.2. Flow of work

Flow of work is concerned with the way work move along with one operation to another. It denotes the volume of work going through the rate at which it moves along and the smoothness of its passage.

The flow of work aims at greater efficiency in every office activity, so that costs are cut down and delays are eliminated. Flow of work is a problem to be solved by the managers.

Flow charts are prepared for the purpose to know whether the flow of work is ideal or there is scope for improvement. The following types of flow charts can be used for analysis

1. Office Layout Chart.

This chart analyses the flow of work of each part of office and eliminates waste motion & back tracking. In the chart, lines are drawn to indicate the movement of office forms and documents from operation to operation.

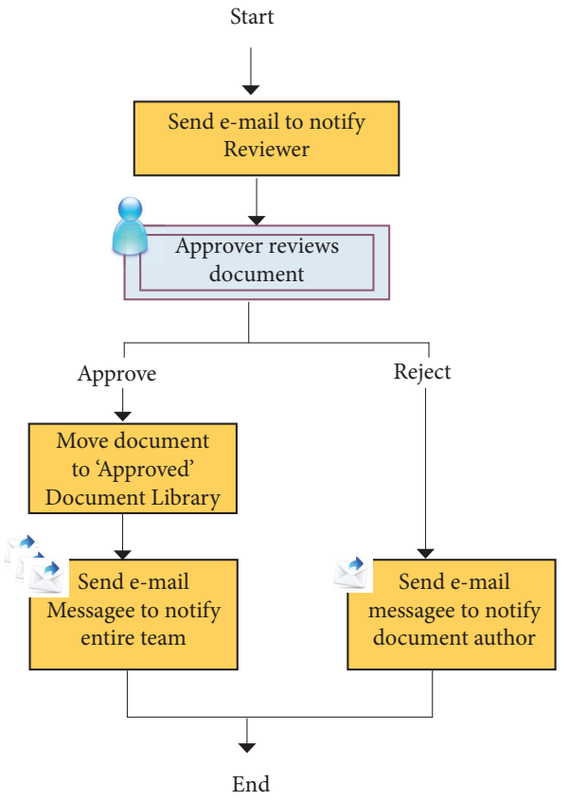

Fig. 7.3. Layout chart

2. Flow Process Chart:

Process chart is also known as work simplification chart. By using certain standard symbols, the chart shows the flow of work under a specific procedure. Presentation and reading is easy because the charts are more graphic with symbols.

It helps to simplify the work. These standard symbols have been developed by the American society of mechanical engineer, New York.

Transportation (Passing the work along or sending it to some other places)

Inspection (checking, comparing, or reviewing the work)
