Part - A

CHAPTER 1 Typography - An Introduction

Introduction of Typography:

Typography is the art and technique of using letters and characters in a readable, legible and appealing format when displayed. The arrangement of type involves selecting typefaces, point sizes, line lengths, line-spacing, and letter-spacing, and adjusting the space between pairs of letters.

The term typography is also applied to the style, arrangement, and appearance of the letters, numbers, and symbols created by the process. Typography may also be used as a decorative device, unrelated to communication of information.

Typography is the work of typographers, typesetters, graphic designers, art directors, manga artists, book artists, and now the person who arranges the type (letters, words, numbers, and symbols) for publication and distribution etc., Typography can also be used as a self- publishing materials by researchers, journalists, newsletter writers and so on. Until the beginning of Digital Age, typography was a specialized occupation. Digitization opened up typography to new generations of previously unrelated designers and lay users.

As the capability to create typography has become ubiquitous, the application of principles and best practices developed over generations of skilled workers and professionals has diminished. So at a time when scientific techniques can support the proven traditions (e.g., greater legibility with the use of serifs, upper and lower case, contrast, etc.) through understanding the limitations of human vision, typography as often encountered may fail to achieve its principal objective: effective communication.

1.1 History of Typography:

The word, *typography*, is derived from the Greek words typos "form" or "impression" and *graphein* "to write", traces its origins to the first punches and dies used to make seals and currency in ancient times, which ties the concept to printing.

Although typically applied to printed, published, broadcast, and reproduced materials in contemporary times, all words, letters, symbols, and numbers written alongside the earliest naturalistic drawings by humans may be called typography.
