

Fig. 5.7. Numerical Classification

3. Geographical Classification:

As the name implies, this classification is based on the geographical origin of a document or paper. This system is combined with one of the two systems already discussed. The classification can be town-wise, district-wise, state wise, country-wise and continent-wise.

The steps in geographical classification are outlined as follows:

(i). First of all geographical limits are set and areas are defined which will make one unit, for example, in export-import trade

(ii). Next step will be to arrange these countries in their alphabetical order, for example, Algeria, Bolivia, Canada, France, Great Britain, USA and USSR, etc.,

(iii). Within each sub-division classification of different parties may be arranged alphabetically or numerically. Such method of classification is very useful for customers' orders in a given area and for filing of correspondence according to town.

4. Subject Classification:

It is a method of classification in which all documents relating to a subject are brought together in one file, even though they may have come from different sources and from many different people. Following steps are taken to install subject classification

5.1. Defining Subject

5.2. Sub-dividing subjects into smaller fractions

5.3. Assigning numbers or arranging subjects in alphabetical order, including sub-subjects, and

5.4. Miscellaneous folders are made for subjects which have not been classified.

Example:

Main Subjects Classified:

Purchases

Sales

Advertising

Sub-division of classified subjects:

Purchases ---------- Scooter Parts.

Purchases ---------- Tractor parts.

Purchases ---------- Motor Parts
