SEWING GARMENT DETAILS

U9Z5KM

LEARNING OBJECTIVES

- **To get a clear idea about the garment details like sleeves, skirts, pockets and yokes.**
- **To understand the method of drafting and constructing sleeves, skirts, pockets and yokes.**

INTRODUCTION

Garment is a piece of cloth which is stitched to suit a human figure. It is also called as dress or apparel. Garment has two main parts, namely front bodies and back bodies. The bodices front and back can make a complete upper garment. By extending their hem lines it can be made as a garment to cover the upper and lower part of the body. But to create variations in garments and to cover body parts like hands other details should be added to garment. The most important garment details are sleeves, skirts, pockets and yokes.

13.1 SLEEVES

LEARNING OBJECTIVES

- **To understand the method of drafting and constructing basic sleeve.**
- **To gain knowledge about different type of sleeves.**

13.1.1 Introduction

Sleeve is a part of the upper garment. It is attached to bodice at the armhole. Sleeves add grace and beauty to any garment. Sleeves can be modified to suit wearers figure. There are different types of sleeves. Some are close fitting and others are stitched with fullness. The length of sleeve can be changed to create short, elbow sleeve, three forth sleeve and full sleeves. Colour, texture, shape and size of sleeves can also be changed to create sleeve variations. Sleeves are generally cut along straight grain, but to create variation, it can be cut on cross grain also (Figure 13.1.).

13.1.2 Types of Sleeves

Sleeves vary depending upon type of garment, the fabric used, one's preferences and needs. The length of the sleeve and fullness in sleeves can be altered, to create new designs.
