POINTS TO REMEMBER

- Weaving is interlacing of yarns at right angles in warp and weft direction.
- Looms are used for the manufacturing of woven fabric.
- Knitting is interloping of yarns.
- Non-woven fabrics are entangled fibres, pressed together by mechanical or chemical processes

ACTIVITIES FOR THE TEACHER

- Download the weaving, knitting operations through U-Tube and present these videos to students.

ACTIVITIES FOR STUDENTS

- Collect samples for different types of woven, knitted and non-woven samples and prepare an album.

GLOSSARY

1.	Beam	A cylinder made of wood or metal for holding warp yarns.
2.	Dent	Space between two reeds.
3.	Selvedge	Edge of the fabric parallel to warp.
4.	Heddle	The heddles are metal strips with an eye located in the center through which the warp yarns are passed.
5.	Grain	The direction of yarns in a fabric.
